

Our Premium Cleaning Agents are safe not only for your rugs but for the environment as well.

- 1) Pre-inspection
- 2) Dry Soil Removal or Dusting/Vacuuming
 - a) Our Portable Dusting Machine uses straps that beat the back of the rug to shake loose soil. The rug can be laid over a grating that allows the dirt to fall through the grating to the floor. After the back has been dusted, flip over the rug and vacuum the face. Some delicate rugs may need to be protected from aggressive agitation.
Be sure the dusting process does not force the rug against sharp or rough grating edges.
- 3) Dye Testing and Stabilization (if necessary)
- 4) Pre-treatments - Rug containing urine, other contaminants or odors may be pre-treated prior to cleaning.
- 6) Apply Cleaning solution – Wool Perfect
- 7) Agitation
- 8) Flush and rinse loosened soil from rugs.
- 9) Fringe Cleaning
- 10) Water Removal/Extraction
- 11) Drying in our specially designed Rug drying room
- 12) Finish and Grooming
